                                                                                                                                                                                                                                                                                                                reduice Vagr-induced inflammation and angiogenesis, e.g. pathological angiogenesis, in mammals, tumour growth and metastesis, coular diseases (diabetic and perinatal hyperoxic rethinopathises, age-related macular degeneration), arthritis, portiasis, and atheroselerosis (he antisone compounds may further be used as research reagents and diagnostics, and to reduce platelet activating factor (pRF) synthesis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to artisense oligonucleotides, complementary to a gene that encodes a mammalian vascular epidermal growth factor (VEGF) receptors Pit-1 or Fik-1. And can inhibit the expression of the VEGF receptors Fit-1 or Fik-1. The antisense oligonucleotides may be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense oligonucleoride complementary to a gene exceding a mammalian wascular endothelial growth factor receptor comprising Flt-1 and Flk-1, for reducing e.g. inflammation, pathological angiogenesis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiinflammatory; anti-angiogenic; ophthalmological; antiarthritic;
antibacterial; dermatological; antiarteriosclerotic; antisense; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bovine Flk-1 mRNA targeting antisense oligo AS2-bFlk-1.

                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to chemically modified DNA sequences of signal transduction associated genes; has sequences are chemically modified using a solution of hisulphite, hydrogen sulphite or condition associated genes; have seen as the condition of the sulphite or solution of the sulphite or solution of the sulphite or for detecting the cycosian methylation state (CpG islands) of these genes, and a method for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular components which contain DNA, a.g. cell lines, biopsies, blood, spatum, stool, urine, contain DNA, a.g. cell lines, biopsies, blood, spatum, stool, urine, contain DNA, a.g. cell lines, biopsies, blood, spatum, stool, urine, contain the settine, kidney, brain, heart, protette, lung, breast or liver, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from composition of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid transurand contains. The present sequence represents an oligonic locatide probe which cancer. The present sequence represents an oligonic locatide probe which cancer. The present sequence to the signal transduction of the sequence of the sequence to the signal transduction of the sequence of the seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                       The present sequence is an example of a poly-glutemine tripler repeat region found in exon 1 of the Huntington disease (HD) gene. The invention is based on the discovery that older the control of the triplet repeat region of the HI gene Preferred oldernic triplet repeat region of the HI gene. Preferred oldernic control of the HI gene to the region to be altered, and have with respect to the HD gene region to be altered, and have chemical modifications or are chimseric RMA/DMN oligonuclaotides.
Haematopoietic cell proliferation disorder related oligonucleotide #554.
                                                                                                                                                                                                                                                                                  Sequence 18 BP; 9 A; 6 C; 3 G; 0 U; 0 other;

                                                                                                                                                                                       Human, haemaropoietic cell proliferation disorder, cytostatic, gene therapy, lymphocytic leukaemia, acute myelogenous leukaemia, cytosine methylation state, probe; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders allowing for improved and informed treatment of patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Olek A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Jymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosiem enthylation state and/or single nucleotide polymorphisms (SNR9) of haemstopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haemstopoietic cell proliferation to disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, dispunsis programsis treatment addormonitoring of membropoietic cell proliferative disorders. The present method enables a highly specific classification of haemstopoietic cell proliferative disorders allowing for improved and informed treatment of perients.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                Chimeric flaviviruses that are avirulent and immunogenic, useful vaccinating against a range of dengue viruses -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a hairpin or hammethead riboryme, designed to cleave BNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CMKI, PONA and Cyclin BI.
Representative axamples of riboryme recognition sites are given in AA88415 to AA86787. The riboryme is the invention is useful for inhibiting restencist by incroduction of the riboryme into cells. The riboryme is resistant to endounclease activity and hence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves RNA encoding a cyclin or cell-cycle dependent kinase other than CDKI, PCNA and Cyclin B1 .
The invention relates to avirulent, immunogenic flavivirus chimeras

CC comprising anino acid mutations in the non-structural proteins of a Cflavivirus. Chimeric viruses containing the attenuation mutated non-structural genes of the virus are used as a backbone into which the CR tructural protein genes of a second flavivirus strain are inserted. These chimeric viruses elicit pronounced immunogenicity but lack the accompanying clinical symptoms of viral disease. Arcenuated chimeric accompanying clinical symptoms of viral disease. Arcenuated chimeric concepts are enabled in a pharmaceutical composition to confer the conference of the

The invention relates to an isolated muchaic acid fragment encoding bacterial tolumes monoxygenase enzyme pathway. The muchaic acid fragments of the invention may be used to solate genes encoding proteins from the same occibr microbial species. Beaterial strains transformed with the p-cessi utilizing (pu) genes are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                  New mucleic acid tragments encoding bacterial tolesse monoxygenesses when the enzyme pathway, useful for isolating pense encoding proceins from the same or other microbial species, and for producing para-hydroxybenzoate
                                                                                                                                                                                                                                                                                                   Example 1; Page 78; 97pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for treating a proliferative skin or eye disease and scarring. The method involves administering a tribozyme (I) which cleaves RNA encoding a cyrothe involved in inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (DUPO ) DU PONT DE NEMOURS & CO E I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     producing para-hydroxybenroate (PBBA) which can be used for synthesizing liquid crystal polymers (LCP). The sequences given in synthesizing liquid crystal polymers (LCP) are sequencing, cloning of the ABA98235-ABA931 represent primers for; pou sequencing, cloning of the pout of persons are presented by the control of polymers of persons the product of polymers of persons are presented by the product of polymers of persons and the identification of pobA and B genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Collection of binding groups for determining or typing samples, especially clinical samples, has groups capable to identify eas all members of the family of nucleic acids of relatively high
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 109; 166pp; English.

                                                                                                                                                                                                                        Co The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contexting the skin with an Co entisense objournlestide, (for insulin-like Growth Pactor [Re]-1. (C receptor, 167 binding protein [IRP]-2 or [Re]-3), which is copable of criministing or reducing growth factor mediated entl proliferation, confidence in an analyze other disorders. The present sequence is an C oligonalceotide which can be used to design the antisense of the C oligonalceotide with the present invention see AMPSISS and C OLIGONALCEOTIST THE METHOD IN THE METHO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         묽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                  oligoniclectide which can be used to design the artisense oligoniclectide of the present invention (see AAVSIS) and AAVSISIS processes the present invention (see AAVSIS) and present invention (see AAVSIS) and the AAVSISIS processes the processes of the processes of the processes of the processes of the standard condition where beging growths, concers of the skin, a bypermovascular condition swears, benefing growths, concers of the skin, a bypermovascular condition swears are presented and processes of the science of the scien
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Patcor [169]-1 receptor, 169 binding protein [1698]-2 or 16889), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mediorating the effects of a disorder, e.g. psoriasis, by administering Ur (ultra-violet) treatment (optional) and an antisense nucleic acid that inhibits or reduces growth factor mediated cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antisense therapy, antiproliferative, antintiammatory, antipostatic, dermatological, keloid, cytostatic, dermatological, keloid, extinct virucide, ophthalmological, keloid, skin disorder; Insulin-like Growth Pactor I receptor; IDP-1, pityriasis, IDP binding protein, IDB-2, I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to enzymatic and antisense nucleic acid molecules that act as inhibitors of the expression of repressor genes encoding the TR2 Orphan receptor, ERR3/OUDP-TR-1, the GATA stranscription factor gene 1 RP-2 and/or the CARTH bisphoment protein (DP). Inhibition is the repressors resorted prevents, inhibition (and consequently increases expression of) genes involved in the production of erythropoietin, granulocyte colony stimulating factor the CARTH stimulating factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Braymatic and antisense nucleic acid inhibition of repressor genes, useful for producing e.g. granulocyte colony stimulating factor protein, interferon alpha and crychropoterin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hammerhead ribozyme substrate #726

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
```

The invention relates to a novel isolated 17 mer nucleic acid sequence.

ARZ65654 to ARZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their

Claim 8; Page 1188; 2745pp; English

map of the human genome

Novel biallelic markers used to construct a high density disequilibrium

The sequences given in AAT28504-07 represent primers which were used in the method of the invention for the detection of F, aeruginosa in a sample. The method comprises using probes and/or amplification primers which are specific, uniquitous and sensitive for determining the
                                                                                                                                                                                                                                  Method for the detection of bacterial species using probes and
primers - allows detection and quantification of antibiotic
resistant bacteria in patients, the environment and food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detection; probe; amplification primer; becterial pathogen; pnumonia; Eacherichia coli; Klebsiella pnemoniae; Beadcamonae serojanoss; Proreus mirabilis; Streppiococcus pnumoniae; Beadcamonae serojanoss; Staphylococcus pidermidis; Entercipiococcus face, Staphylococcus serojanos; Etachylococcus serophyticus; Streppiococcus pyogenes; unitary tract; Staphylococcus serophyticus; Streppiococcus pyogenes; unitary tract; Heamophilus influences; Dorazella catarthalis; Septicaemia; meningitis; infection; intra-abdominal infection; Mini infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, well as the characterisation of the differential efficacious responses to and side forms.
                                                                                                                                                                   Claim 38; Page 46; 216pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-MAR-1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   W09608582-A2

문 Ó

The invention relates to a retinoid X receptor-gamma (RXR-gamma) knockout mouse whose germ and somatic cells contain an insertion of

an

Example 2; Column 12;

20pp;

English

New genetically engineered nice containing alterations in the gene encoding retinoid X receptors, useful for identifying agomists and antagonists of the receptors and in studying retinoic acid mediated

WPI; 2000-531490/48.

These processes, Hamman and Maria and Morarchia et al. 18. These brocesses, Hamman and Maria and Morarchia et al. 18. These bacterial species are associated with approx. 90 of urinary tract infections and with a high proventage of other severe infections. The sections and other severe respiratory ract infections. The settlements and other severe respiratory ract infections. The method may also be used to evaluate a bacterial resistance to the settlements and other severe respiratory tract infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   presence and/or amount of mucleic acids from selected bacterial species in any sample, where the bacterial nucleic acid comprises a selected target region hybridisable with the probes or primers. The method comprises contacting the sample with the probes or primers and detecting the presence and/or amount of hybridisable primers or amplification the products as and indication of the presence and/or amount of the products as and indication of the presence and/or amount of the
                                                                                                                                                                                                                                                                                                                                                                                                Chambon P,

Kinses anchor procesn (RARP), with isoclaurine residue at position 646 replaced with vuline, leucine or phenylalanine. AKB is useful for explaced with vuline, leucine or phenylalanine. AKB is useful for explaced with vuline, leucine or phenylalanine. AKB is useful for explanation in indicative detecting an allelia vuriant of a human AKBP10 gene which is indicative of an alteration in signal transduction, where the alteration is related

ARX22345-84 represent phosphorothiate antisense oligonucleotide which are directed against Paw (factor associated with N-Shase activation) mRNA, Paw is a mediator of tumor necrosis factor (TWP) induced activation of N-Shase. The antisense oligonucleotides are 8-30 mucleotides in length. The antisense oligonucleotides are useful for treating diseases associated with an inflammatory response.
                                                                                                                                                                                                                                                       Claim 3; Columns 27; 27pp; English.

                                                                                                                                                                                 CC reall receptors comprise alpha and beta chains with the base chains CC invention of theta, beta diplate and Cheta regions. The present converted to the "ARRAGITY" movif (see ANA21989). The DESENTARY CC peptide is a common nevif found in the T ce! I receptors of a subset of the ANA21981. T ceils. The LGRAGITY peptide may be used to vaccinate common theoretic found in the T ce! I receptors of a subset of the CC patients for prevention of autonumen diseases e.g. multiple soleronis. The Common throughout the soleronis of autoimmune uvecoretinitis, mysethenis gravia, systemic lupus erythematosus. CC autoimmune uvecoretinitis, polymyositis, and certain types of diabetes. CC various human V gene fragments from T cell clome were isolated (see CC ANA91796 to ANA9577), which encoded peptides specific for the 83-99 CC peptide of myslin basic procein (MEP), which in turn is implicated in multiple soleronis. The ording regions of ANA91796 to ANA9577 were constituted to examine the Vegene rearrangments between individual MRB98-99 T cell clomes. The present sequences as PCC primer used to isolate the constraint of ANA9179 to the ANA9179 were constraints.

                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides antisense compounds taxgeted to a coding region, JUTR or 5'UTR of a nucleid acid molecule encoding human cPEL.

(transcriptional activator). The antisense compounds are useful as research agents and disgonarios such as in the abundation of the function of a particular gene. The antisense compounds can be useful as therapsurio modalities that can be configured to be useful in treatment regimes for treatment of calls, tissues and animals especially humans. In the prior art, there are no known the separation genes which the prior art, there are no known the separation genes which seffectively inhibit the synthesis of CEEL and additional seems capable of inhibiting cREEL function are still required. Sequence MACISSH--627 represent antisense hosphorochiouse collapseconymucleotides inhibiting human cerr and the corrections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for selecting optimal subsequence antisense targets. The method involves preparing an antisense cargets and appared to the property of the continuous parts of the continuous parts of the carget many sequences, as well as antisense oligonucleotises capable of binding DNA. The antisense and antigene libraries are useful for preparing therapeutic agents for the treatment of genetic disease. The present DNA sequence is scome mosals "vitus BMY) SANDA protectin target DNA related to the

antisense targets. The method involves preparing an antisense oligonucleotide capable of inhibiting mRNA spression of target mRNA sequences, as well as antisense oligonucleotides capable of binding DNA. The antisense and antisense liboraties are useful for preparing therapeutic file antisense and antisense liboraties are useful for preparing therapeutic agents for the treatment of genetic disease. The present DNA sequence is phosphorothicate antisense oligonucleotide which is targetted to Brome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                co absorption and/or emission wavelengths from the others and specially parallel to each other ponducing the same transverse to M and essentially parallel to each other ponducing conditions (IIII) into desection regions for individual F (and attached (IV)) (19) detectors (V) for track and marker-resorded (IV) (19) detectors (V) for track and marker-resorded (IV) in M and preferably parallel to the laser beams, and aligned to a particular chain such can provide a positionally resolved desection of the same to an provide a positionally resolved desection arrangement (A). The appetral selectivity of the filters, the absorption designment (A) the appetral selectivity of the filters, the absorption design and the wavelengths of the lasers are chosen such that the use of four lasers and at least four (V) allows reaches sequencing that the use of four lasers and at least four (V) allows reached to the section of at least four described to analyze muclic acids fon sequencing for fluorescent markers and laser avaplangths allowed differential detection of an evaluation of fluorescent emissions from several dyes, i.e. the component markers and laser wavelengths allowed differential detection. This callows a reduction in cost, reagent consumption and labor in consumption and labor in this callows a reduction may be applied to the marker and allows a constant marker than the market detection. This sequence to increase band or surface the method of the invention of contraction that the method of the invention contracts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                        using different F in a single electrophoretic track, and many tracks can be analyzed in a single run, with 0,2 million bases or more, determined on a single gel plate with 384 tracks. This reduces costs, reagent consumption and labor involved in large-scale sequencing projects. This sequence represents a fluorescently labelled primer used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ansorge W,
Wurmbach B;
                                                                                                                                                                                 (P) and from a sequencing reaction, are separated in a single track according to size and analyzed independently of each other. The method is used to analyze products of muclei cards sequencing reactions.

Simultaneous evaluation of four or more sequencing reactions can be done
                                                                                                                                                                                                                                                                             This invention describes a novel method for the analysis of nucleic acids (NA) in which four products (A), labelled with different fluorescent dyes
                                                                                                                                                                                                                                                                                                                                                 Example 1; Page 6; 10pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                     New analysis of nucleic acid, useful for sequencing, comprises separating four differently labeled products in a single track and
                                                                                                                                                                                                                                                                                                                                                                                                    independent detection

                                                                                                                                The invention relates to a typing kit for judging human leukocyte antigen IHLA) genotype of a semple by hybridising a substrate on which 10-2k base oligonucleotides (ABLJ0512-ABLJ1809) originating in the sequences of genes s.g. belonging to HHA. Class I antigens on human genome and containing gene polymorphisms as alloantigens have been immobilised as primers for amplification of cleaved nucleic acids relating to gene polymorphisms. The method is useful for judging HMA genotypes of individuals by determining imminogenetic differences before transplanting between them, providing genetic information to decide compatibility of cryan and tissue for transplantation e.g. of bone marrow, kidney liver, pancrass, Langerthans slate tin pancrass and cornea, susceptibility of pancrass, Langerthans slate tin pancrass and cornea, susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human leukocyte antigen (HLA) typing, useful for judging HLA genotypes
of individuals e.g. by determining immunogenetic differences when

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-DEC-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      detection. To cell receptors comprise alpha and beta chains, with beta chains comprising the following regions from N-terminus: Octaminus: Voeta-Dbeta-Dbeta-Cbeta. To cell receptors naturally wary in the Voeta-Dbeta-Dbeta-Speta. The peptides of the invention are used for treating aucoimmine disease e.g multiple sclerosis. The present sequence is a reverse transcription (RT)-RCR primer specific for human Vaeta-Dbeta-Dbeta junctional regions of independent MBRB3-99 T cell coles. This sequence is used in the exemptification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inoko H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-JUN-2001; 2001WO-JP04662

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local Similarity
                                                                                                                                                                                                           This invention describes novel oligonucleotide primers or peptide nucleic acid (BNA) oligoners for detecting single nucleotide symporphisms (SNP) and optosize methylation status in chemically pretracted genomic DNA. The oligonucleotides are used for disgnosts and/or prognosts of cancer and a range of diseases including immune system, gastrolinestinal, respiratory, entral nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. BACOUGL-BESSORT approach the oligoners described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in selectronic format from MIPO at fip-wipo.int/pub/published_pot_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel oligonucleotide primers or peptide nucleic acid (BNA) oligomers for detecting single nucleic depolymorphisms (SNP) and cytosine methylation statum in chemically pretreated genomic NNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Oligonucleotide SEQ ID NO 229564 for detecting SNP TSC0055984.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABH29587 standard; DNA; 13 BP

       This invention describes novel oligonucleotide primers or peptide municis and (PNA) oligonars for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically precreated genomic DNA. The oligonucleotides are used for diagnosts and/or prognosts of concer and a range of diseases including immune system, gentrointestinal, respiratory, contral nervous system, catiovascular and metabolic disorders. The colligonars are also used for detecting cell type differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Olek A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes noval oligonucleotide primers or peptide mucleic acid (PNA) oligoners for detecting single nucleicide polymorphisms (SNP) and cytosine methylation estatus in chemically pretracted genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, graticularitation, respiratory, contral nerveus system, outdownsclar and metholic disorders. The oligoners are oligoners are oligoners are oligoners are oligoners are oligoners described in the invention.

The oligonucleptides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting call type differentiation.

MICROIN-MISRORI represent the oligomers described in the invention.

MICROIN-MISRORI represent the oligomers described in the invention.

MICROIN-MISRORI represent the oligomers described in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a typing kit for judging human leukcopte antigen (HiA) genotype of a sample by hybridishing a substrate on which 10-24 base oligonucleotides (ABL30512-ABL31809) originating in the sequences of genes e.g. helooging to thim class I antigens on human genome and containing gene polymorphisms as allowartigens have been immobilised as primers for amplification of cleaved mucleic acids relating to gene polymorphisms. The method is useful for judging HIA genotypes of molividuals by determining immunogenetic differences before transplanting between them, providing genetic information to decide compatibility of organ and tissue for transplantations e.g. of bowe marrow, kiney, liver, pancress, Langerhams splet in puncress and cormax susceptibility disposes of comments of the provided pancress, Langerhams splet in puncress and cormax susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human laukcoyte antigen (HLA) typing, useful for judging HLA genotypes
of individuals e.g. by determining immunogenetic differences when
transplanting between them

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the rb gene. Of these, only oligomucieotides ANV49008-52 resulted in effective downsequiation of negative growth control by rb, while oligonucleotides ANV49052-256 had little effect. The oligonucleotides examplify the invention. The specification describes oligonucleotides that contain 8-30 mucleotides, which contain at most 8 nucleotides that contain 8-30 mucleotides, which contain at most 8 nucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Arthritic condition; graft tolerance; immune response; target; cleavage; harmethead ribozyme; hairpin ribozyme; human; rabbit; mouse; collagenase; stronelygin; gynovial membrane; joint, arthritis; cstecarthritis; rheymatoid arthritis; autoimmune disease; allergy; inflammation;

The present invention describes a novel enzymatic mucleic acid (SNA) having a hammerhead motif (IM) comprising: (i) at least 5 those residues; (ii) a 2"-c-allyl modification at position 4 of the SNA; (iii) at least ten 2"-omethyl modifications; and (iv) a 3"-end modification at least ten 2"-omethyl modification; and (iv) a 3"-end modification. The SNA; so an inhibit collasgemase and excomelysin production in the synovial membrane of joints for the treatment or prevention of arthritis particularly ossessationathics or phematorid arthritis. The SNA 5 can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Draper K, Gustofson J, McSwiggen J, Pavoo P, Stinc

                                          expression which accompany treatment with retinoids and dexamethasone. The concentration of ribosyme required to affect a therapeutic treatment is lower than that required of artisense molecules, and is highly specific. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                              be used in diagnosis. Ribozyme therapy impacts on the expression of stromelysin without introducing the non-specific effects upon gene
                                                                                                                                                                                                                                                                                                                                                                                            be used to treat antigen presenting colls of a donor to induce tolerance in a recipient to an alloantigen of a donor. They can also be used for enhancing graft tolerance or for treating autoimmune disease, and for treating alterigues, and other inflammatory conditions. The ERWs can also treating alterigues and other inflammatory conditions.
present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 1; Page 154; 307pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     treatment of auto-immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Enzymatic nucleic acid molecules having a hammer-head motif - used for the treatment of arthritis, induction of graft tolerance or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1996-300653/30.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AbA23422 represent their corresponding target sequencie. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an make encoding angiogenic factor, sepecially ARM7, integrin submit alpha-6, or Yie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARM), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, vertuca vulgaris, angiotibroms of tuberous solarosis, polytane stabins, Surge Waber syndrome, Kippel-Transumay-Waber syndrome, Oglez-Waber Tahin, Surge Waber and Chier syndrome, come of the syndrome and chier syndrome and diseases rejected to the lavels of RAM7 (The 2), and the syndrome comes and diseases rejected to the lavels of RAM7 (The 2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ART) gene, an integrin shbuilt beta 3 gene, an integrin alpha 6 subunit gene, or a fie-2 gene. AAA1675 to AAA11761 and AAA1762 represent riboryme sequences for ARVI and AAA1763 to AAA1763 by AAA1763 by AAA1764 represent their corresponding target sequences; AAA1768 to AAA1983 and AAA19807 to AAA1914 represent riboryme sequences; AAA1768 to AAA1893 and AAA1980 to AAA1914 represent riboryme sequences for Tie-2, and AAA1898 to AAA1998 to AAA1918 by AAA1898 to AAA1989 to AAA1918 by AAA1898 to AAA1989 to AA

The present invention describes enzymatic mucleic acid molecules with Mx Cleaving activity, which specifically cleave RNA mocoded by an axt) hydrocarbon nuclear transporter (ARNY) gene, an integrin submit beta 3 comes, and integrin submit beta 3 comes, and advantage of the Manifest to ANA1752 to ANA1762 and ANA1763 to ANA1762 and ANA1763 to ANA1762 and ANA1764 represent their corresponding target sequences; ANA1645 to ANA1684 compressed their corresponding target sequences; ANA1645 and ANA1965 to ANA1686 to ANA1966 and ANA1965 to ANA1968 and ANA1966 and ANA1968 to ANA1968 to ANA1968 to ANA1968 to ANA1968 and ANA1968 to ANA1968 to ANA1968 to ANA1968 and ANA1968 and ANA1968 to ANA1968 and ANA1968 analysis and ANA1968 analysis and ANA1968 and ANA1968 analysis and ANA1968 analysis analysis and ANA1968 analysis and ANA1968 analysis analysis and ANA1968 analysis analysis and ANA1968 analysis anal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AMA3142 represent their corresponding target sequences. The riborymes of the invention are used for modulating the synthesis expression and/or teability of an make encoding angiogenic factor, especially ANN; integrin submit beta-3, integrin submit alpha-6, or Tie-2. They are especially used to treat center, diabetic retinopathy, age related macular degeneration (ANN), inflammation, and arthitis, as well as neovascular glaucoma, myopic degeneration, psociasis, vertuce vulgaris, angiotibroma of tuberous electrosis, por-vine stains, Sturge Mebor syndrome, Kippel-Treamung/Meber syndrome, Osler-Meber-Randu syndrome, and other syndromes and diseases related to, the levels of ANN, Tie-2, and other syndromes and diseases related to, the levels of ANN, Tie-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel ribozymes for modulating the synthesis, expression and/or stability of an mRNA encoding an angiogenic factors \cdot
Ribozyme; erythropoietin; granulocyte colony stimulating factor;
                                                                                                                                       Hammerhead ribozyme substrate #113.

                                                                                                                                                                                                                                                                  Ribozyme; erythropoietin; granulocyte colony stimulating factor; interferon alpha; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to enzymatic and antisense nucleic acid molecules that act as inhibitors of the expression of represent genes encoding the TR2 Oxphan receptor, RAR3/COUP-TP-1, the GATA encoding the factor gene. IR-2 and/or the CANT isplacement protein (CDP). Inhibition of the represent removes prevents inhibition of exprinciplestin, granulocyte colony stimulating factor protein and interferon alpha.
